WILLIAM ELLIOTT & SONS'

Seventy-First Annual Catalogue

NOVELTIES AND SPECIALTIES FOR 1916

ALYSSUM BENTHAMII COMPACTUM LILACINUM SWEET ALYSSUM "LILAC QUEEN"

Distinct, new variety of the annual Sweet Alyssum, with pure lilac flowers. The plants are of dwarf, compact, upright growth and resemble, when in full bloom, a tiny Candytuft. Equally as useful for carpet-bedding. **Pkt. 15c.**

ARTEMISIA SACCORUM VIRIDIS

New annual species introduced from China. Of extremely vigorous growth, this new plant forms elegant and very regularly branched pyramids $3\frac{1}{2}$ to 5 feet in height, resembling in aspect a small Fir tree. The color of the fine foliage is a rich, dark green; flowers inconspicuous. To be recommended as single specimens on lawns or for groups of foliage plants. **Pkt. 20c.**

ASTER PERFECTION WHITE

We consider this the finest midseason upright Aster in cultivation. The plants are extremely vigorous, with unusually broad, dark green leaves and stout stems. They carry about twelve large flowers on long stems free from side branches. **Pkt. 25c., 2 for 40c.**

ASTERS VICK'S LAVENDER ROCHESTER AND PURPLE ROCHESTER

These magnificent flowers are more double and more Chrysanthemum-like than those of the original Lavender Pink Rochester. The long, narrow petals fall over one another in a charming cascade of color, forming a wonderfully shaggy mass that cannot be equalled for richness of effect. In addition to their great diameter they have a most remarkable thickness, making them truly massive. Vick's Lavender Rochester is an exquisite shade of clear light lavender. Vick's Purple Rochester is a rich shade of deep purple. **Pkts., either color, each 20c., 2 for 35c.**

ASTER VICK'S LAVENDER KING BRANCHING PLANTS

Identical with the well-known Violet King in every respect except the color, which is a pleasing shade of deep lavender. **Pkt. 25c., 2 for 40c.**

CENTAUREA MOSCHATA ROSEA

Charming new variety of the hardy annual Sweet Sultan, about $2\frac{1}{2}$ to 3 feet in height. The color of the flowers is in opening a very delicate rosy white, with light pink stamens and style, changing into a tender rosy pink later on. Excellent for cutting. **Pkt. 15c.**

CHRYSANTHEMUM, SINGLE WELLS' NEW EARLY FLOWERING

A remarkable new race of single Chrysanthemums, flowering abundantly the first year from seed; equal to the best named sorts. Sow early in March in a box in the house or hotbed and plant out early in May, 18 inches apart. These plants will flower from July till frost. **Pkt. 15c.**

CLARKIA ELEGANS FL. PL. APPLEBLOSSOM

Very delicate tint of this favorite hardy annual so useful either for cutting purposes or for pot culture. Flowers perfectly double. **Pkt. 15c.**

CHRYSANTHEMUM LEUCANTHEMUM SECUNDUM "JUNE MARGUERITE"

The plant of this new introduction reaches the height of about 3 feet, profusely producing its pretty, long-stemmed flowers. The latter are much larger and more elegant than those of the Spring Marguerite. Its flowerets being loose and somewhat ray-like and not so closely set, give the whole flower a most graceful and winning appearance. **Pkt. 15c.**

CYPERUS ADENOPHORUS

Extremely ornamental Cyperus from Brazil. When sown early, the seedlings will form well garnished plants with gracefully bent, linear-lanceolate, dark green foliage, above which the elegant panicles of light green flower spikes appear. The latter are composed of a great number of spikelets. Effective and very decorative plant for the greenhouse or conservatory or for the open ground during Summer time. **Pkt. 25c.**

DIMORPHOTHECA SINUATA

Equally useful and of the same easy culture as the Dimorphotheca aurantiaca, this new South African species distinguishes itself essentially by the singularly pretty color of its flowers. They are $2\frac{1}{2}$ to $2\frac{3}{4}$ inches across and show a uniform, clear, satiny buff or light chamois coloring with a bluish disk, when fully open in sunshine; the reverse of the petals is purplish red. This rare coloring is quite distinct and new. The plants are 12 to 15 inches high and form regularly branched bushes, densely covered with numerous flowers. Novelty of great merit. **Pkt. 20c.**

GODETIA GRANDIFLORA CATTLEYA

Plants compact, about 1 foot high, flowers large, well shaped, of a pure Syringa-bluish color, with silvery satin glow. Very pretty and extremely effective variety. **Pkt. 20c.**

LARKSPUR NEWPORT SCARLET

Can be treated either as an annual or biennial. Seed should be sown as soon as the ground can be worked, for early flowering in July. As it does not stand transplanting well the seed should be sown where the plants are intended to flower. **Pkt. 10c.**

Artemisia sacorum viridis

NIGELLA MISS
JEKYLL

A beautiful and attractive long-stemmed variety of the popularly-known Love-in-a-Mist. The flowers are double and of a clear Cornflower blue, prettily set in slender, elegant foliage. The plants grow 18 inches high and are of easy culture. **Pkt. 10c.**

PAPAVER SOMNIFERUM FRINGED
"HANSA POPPY"

The flowers of this new Poppy have a pure white ground color, passing toward the finely slitted edge to a deep crimson. The single fringed Poppy is one of our prettiest and most favored annuals owing to the fact that every amateur can easily grow it without any experience. **Pkt. 10c.**

PAPAVER PÆONIFLORUM PEACH
PINK

Single Peony-flowered annual Poppy, with large, rosy-peach flowers turning to salmon rose. Each petal is marked at the base with a conspicuous steel-blue spot. **Pkt. 20c.**

PETUNIA HYBRIDA NANA ERECTA CARNEA

Pyrethrum roseum hybridum grandiflorum

SALVIA BEDMAN'S
OSTRICH PLUME

The most beautiful of all Salvias of recent introduction. The habit of the bush resembles that of the Salvia Splendens type. This Salvia produces a plume; one plume alone is a bouquet in itself. The bush is well covered with these plumes. The color the brightest of scarlet, much more so than the other scarlet Salvias, which adds much to the beauty of the flower. **Pkt. 50c.**

SCHIZANTHUS WISETONENSIS BUTTERFLY,
or FRINGED FLOWER

This variety is now largely used as a pot plant for the house or conservatory. It is remarkably free flowering and presents a beautiful appearance with its myriads of blooms, the ground color of which is white, dotted with delicate rose, with a large spot on the upper lip, varying in shade between golden yellow, carmine, rose and light brown. **Pkt. 25c.**

SCHIZANTHUS WISETONENSIS ALBUS BRIDAL
VEIL

New constant variety gained by selection out of Schizanthus Wisetonensis. It grows about 16 inches high, and the bushes are literally covered with large, round, snow-white flowers. Especially valuable for pot culture. **Pkt. 25c.**

WM. ELLIOTT & SONS' RELIABLE VEGETABLE SEEDS

We desire to call the particular attention of our friends and patrons to the following list of Vegetable Seeds, which will be found to embrace all the leading and most popular varieties in cultivation, including all novelties of merit.

ARTICHOKE

Artichaut. *Alcachofa*. *Artischocke*.

One ounce will sow 100 feet of row, and produce about 500 plants.

A deep, rich sandy loam is best adapted for this plant. The seed should be sown thinly in drills $1\frac{1}{2}$ inches deep and 1 foot apart. When large enough, transplant to permanent rows 3 feet apart, allowing 2 feet between the plants. They reach maturity the second year, and in the northern States should be protected in Winter by a covering of leaves or coarse manure. A bed will continue in bearing for several years.

Improved Large Green Globe. Heads large, fleshy, and of rich flavor. Pkt. 10c., oz. 40c., lb. \$4.50.

Jerusalem. Distinct from the above. Grown for the tubers, which resemble potatoes, and are cultivated in a similar manner, but the rows should be at least 4 feet apart. Qt. 25c., pk. \$1.50, bus. \$5.00.

ASPARAGUS

Asperge. *Esparrago*. *Spargel*.

One ounce will sow 50 feet of row, and produce about 1200 plants.

Sow the seed as early in Spring as the soil can be worked, in drills 12 to 14 inches apart, and when well started thin out to 3 inches apart. When one or two years old, transplant into permanent beds, thoroughly trenched, 2 feet or more in depth. Set the plants in rows 2 feet apart and not less than 18 inches apart in the row. Care should be taken that the roots are well spread, and set at a depth of 6 inches below the level of the bed. Cover only 2 or 3 inches, and fill in gradually as the plants grow. Very little, if any, should be cut the first year after transplanting, but a fair crop can be cut the second year. Every Fall after the tops have been cut down apply a dressing of coarse manure, and in the Spring fork it in. An occasional top dressing of salt at the rate of one-half pound per square yard is also beneficial and keeps down the weeds.

Columbian Mammoth White. The stalks are very large, clear white, and remain so as long as fit for use. Pkt. 5c., oz. 10c., $\frac{1}{4}$ lb. 20c., lb. 60c.

Conover's Colossal. The standard variety. Pkt. 5c., oz. 10c., $\frac{1}{4}$ lb. 20c., lb. 60c.

Palmetto. A large, early variety, of a deep green color. More regular and even in size than any other variety. Pkt. 5c., oz. 10c., $\frac{1}{4}$ lb. 20c., lb. 60c.

ASPARAGUS ROOTS

A saving of one or two years is effected by planting roots. A bed 12 by 40 feet, requiring about 100 roots, should give a sufficient supply for an ordinary family. If planted in rows 3 feet apart and 2 feet between the plants, 7260 roots will plant an acre. As nothing is gained by using one-year-old plants we offer only strong two-year-old roots. If ordered by mail, postage must be added at the rate of 15c. per 100 to the following prices:

ALL ROOTS ARE TWO YEARS OLD

Columbia Mammoth White. Per 50, 50c; 100, \$1.00; 1000, \$7.00.

Conover's Colossal. Per 50, 50c.; 100, \$1.00; 1000, \$7.00.

Palmetto. Per 50, 50c; 100, \$1.00; 1000, \$7.00.

Special prices on larger lots on application.

Asparagus, Palmetto

Asparagus Culture

BEANS

Beans like a well-drained, rich and light loam, and should not be planted too early, as they are very sensitive to cold and wet. Plant about the middle of April when warm and favorable, and at intervals throughout the season for a succession until the latter part of August. Bush varieties should be planted in drills 2 feet apart, and from 2 to 6 plants to the foot in a row. Keep them well cultivated and draw the earth up to the stems.

BEET

Betterave. *Remolacha*. *Salatrübe*.

One ounce will sow 50 feet of drill; 5 to 6 pounds required for an acre.

Well enriched, light soil is best adapted to this crop. Sow in drills about a foot apart, covering the seeds about an inch, pressing the soil firmly over the seeds, which is important to secure good germination. When the young plants are 2 or 3 inches in height they should be thinned to stand 6 to 8 inches apart. A good time to make the first sowing is when the trees are starting to leaf, and continue successive plantings every 3 or 4 weeks until end of July, so that a constant supply of fresh, tender roots may be had throughout the season.

If to be forwarded by mail, add at the rate of 7c. per pound for postage.

Cabbage

CARROT

Carotte. *Zanahoria*. Möhren.

One ounce will sow 100 feet of row; 2 to 3 pounds required for an acre.

Avoid sowing on newly manured ground, which has a tendency to produce forked roots; the land should, therefore, be manured the previous season. For early crops sow as soon as the ground can be worked, and for later crops from the beginning until the end of May, in rows 15 inches apart and $\frac{1}{2}$ inch deep. Thin out the young plants to 5 inches, and keep the surface open by a frequent use of the hoe.

For field culture, sow in drills from 20 to 30 inches apart, and when plants are 1 to 2 inches high, thin out to from 4 to 8 inches apart in the rows. An important feature in sowing Carrots, as in all other seeds, is firming the seed in the soil; this may be done with foot or spade.

If to be forwarded by mail, add at the rate of 7c. per pound for postage.

Earliest French Forcing. Earliest of all varieties, and especially adapted for forcing; delicate, fine grained, and remarkably fine flavored. Pkt. 10c., oz. 25c., $\frac{1}{4}$ lb. 75c., lb. \$2.50.

CAULIFLOWER

Chou-Fleur. *Coliflor*. Blumenkohl.

One ounce will sow a bed of 40 square feet, producing 2000 plants.

This crop will grow in any soil that suits Cabbage. Sow the seed in a hotbed in January or February, and when the plants are large enough transplant 3 inches apart in boxes or hotbeds until time to plant out. If hardened off they are seldom injured by planting out as early as the ground can be properly prepared. Set in rows 2 feet apart and 2 feet between the rows. Keep them well hoed, and bring the earth gradually up to the stems, watering freely in dry weather, and especially when they begin to head. Cauliflower will not head in hot, dry weather, therefore planting should be regulated so that it will head early in Summer or Autumn.

CELERY

Celéri. Apio. Sellerie.

One ounce will sow about 300 feet of a row and produces about 5000 plants.

Sow in the open border early in April in rich ground, pressing the seed down rather than covering with soil. When the plants are 3 inches high, transplant 4 inches apart into temporary beds of soft, rich soil until they acquire sufficient strength for planting out. If they grow too quickly before needed for planting out, shear the tops off when about 4 inches in height, and they will grow more stocky. Plant in rows 3 feet apart, and set 8 inches apart in the rows. After the planting is completed, nothing further is necessary for 6 or 7 weeks, except running through between the rows with the cultivator or hoe, and freeing the plants from weeds. About the middle of August earthing up is necessary for blanching and whitening of that which is wanted for early use. After the soil has been drawn up against the plant with the hoe, it is further pressed close around each plant by the hand, firm enough to keep the leaves upright and prevent them from spreading, using care to prevent the soil falling into the heart of the plant.

Lettuce, Elliott's Hothouse

LETTUCE

Laitue. Lechuga. Salat.

One ounce will sow 300 feet of row; 3 pounds will plant one acre in rows 3 feet apart.

For early plants, the seed may be sown in September, and transplanted into coldframes for protection during the Winter; or sow in February or March in hotbeds with a moderate bottom heat, cover lightly, and thin sufficiently to prevent crowding; gradually harden by exposure. Transplant in the open ground in a sheltered location in April; set in rows a foot apart, and 6 inches apart in the row. When heads begin to form, thin out by using alternate plants in the rows. For succession sow in prepared beds as soon as the ground can be worked, and at intervals of two weeks during the Summer. MELON, MUSK (Cantaloup)

Melon Muscace. *Melon Muscatel*. Cantaloupe.

One ounce will plant 80 hills; three pounds is required for one acre.

Melons should be planted on a rather light, rich, sandy loam. The middle of May is early enough for planting in open ground. Make hills about 6 feet apart each way, put in each a good shovelful of well-composted manure, press it down and cover with earth. Upon each hill plant 6 to 12 seeds about $\frac{1}{2}$ inch deep. When up, and all danger of insects has passed, pull out all but 3 plants. Cultivate until the vines cover the ground, and pinch the ends off the growing shoots to induce early fruiting. Slug shot or tobacco dust is excellent to sift over the young plants when the dew is on to prevent attacks of insects. A few hills for early use may be had by sowing in hotbed on pieces of sod or in pots. The seed may also be started outdoors under hand-frames or glasses.

If to be forwarded by mail, add at the rate of 7c. per pound for postage.

ELLIOTT'S SURE-CROP MUSHROOM SPAWN

Ten pounds will spawn about 10 feet square.

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate, and in the open air during the Summer and Fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made, collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to your requirements, say 3 feet wide, 10 feet long, and from 2 to 3 feet deep; beat it well down with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Break the spawn in pieces 2 inches square, and put them 6 inches apart all over the bed, then cover the bed with 2 inches of rich soil. When the soil looks dry, give a gentle watering with tepid water, using a rose on the watering-pot.

If by mail, add 10c. per pound for postage.

English Spawn. Lb. 15c., 8 lbs. \$1.00. Prices of larger quantities on application.

French Spawn. In 3-lb. boxes, \$1.25 each.

ONIONS

Oignon. Cebolla. Zwiebel

One ounce will sow 100 feet of row; 5 pounds is required for one acre.

For Onion culture the ground should be prepared the previous Autumn by plowing or spading deeply, using plenty of well-rotted barnyard manure. A rather strong, deep, rich, loamy soil is considered most suitable, although we have seen splendid crops raised from a stiff, clay soil, which was well under-drained. Sow the seed as early in Spring as practicable, in shallow drills 1 foot apart, covering with fine soil, which should be pressed down by the use of a light roller or the back of a spade. When the young plants are strong enough thin out to 4 inches apart. Keep the surface of the ground open and free from weeds by hoeing frequently.

If to be forwarded by mail, add at the rate of 6c. per pound for postage.

One ounce will sow 200 feet of row; 3 to 4 pounds for one acre.

Sow as early in Spring as the weather will permit, in drills 15 to 18 inches apart, covering with fine soil to the depth of half an inch. The soil should be rich and deep, manured, if possible, the previous Autumn. Thin out the young plants to about 6 inches apart, and keep the surface of the ground open, and free from weeds. It is perfectly hardy, and may remain in the ground through the Winter; indeed, the fine, sugary flavor for which the vegetable is noted, is only developed by a severe frost.

PEAS

Pois. *Chicharos o Guisantes*. Erbsen.

One quart will plant 100 feet of row; two bushels will plant one acre in rows 3 ft. apart

Peas luxuriate in a free, light, rather rich soil, abounding with vegetable matter. For first-early crop sow in March or April, according as the ground can be worked, and at intervals of two weeks for succession. For private gardens they are generally sown in single or double rows 2 inches deep and from 3 to 4 feet apart, according to the height of the variety and strength of the soil. Those growing over 2½ feet in height should be supported with brush. After the end of May sowing should be discontinued until beginning of August, when a profitable crop may be secured by planting the extra-early varieties.

If to be forwarded by mail, add 7c. per quart for postage.

HERBS FOR CULINARY AND MEDICINAL USE

Herbs should have a place in every garden. Any good housekeeper knows the value of the little patch of herbs upon which she makes daily drafts in the Summer, and which furnishes such a nice collection of dried herbs for Winter seasoning, while as domestic medicines several kinds are held in high repute. The culture is very simple; the best way is to make a little seed-bed in the early Spring, and set the plants out in a bed as soon as large enough. They should be harvested on a dry day, just before the blossom develops, dried quickly and bottled, or closely packed in dry boxes with the air entirely excluded.

Lawn Grass

GRASS SEEDS—LAWN AND PASTURE MIXTURES

For years we have made Grass Seed mixtures one of our special studies and are at all times eager and willing to make estimates on your requirements, giving our best advice as to your needs. For Hay and Permanent Pasture, we also have different brands suited to the various climatic conditions. If in doubt, write us before ordering and you will have a reply by return mail.

ELLIOTT'S CENTRAL PARK For quickly producing a permanent thick and velvety sward of grass, this brand of Lawn Grass cannot be excelled. It is the best mixture of grasses sold for lawn-making and will give satisfaction wherever sown. Price, qt. 20c., pk. \$1.50, bush. of 20 lbs. \$5.00.

ELLIOTT'S EMERALD Is carefully compounded of grasses which ripen successively, thereby retaining their green appearance. For various soil conditions this mixture is well suited, giving good results, even in small city grass plots, where the soil is generally stiff and heavy. It is also valuable for use on railroad embankments, terraces and exposed lawns, also for renovating old worn-out lawns, and re-seeding bare places. Price, pk. \$1.00, bush. of 16 lbs. \$4.00.

ELLIOTT'S SHADY NOOK Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places; for sowing in such places we recommend the use of this special mixture. It will quickly produce an abundant and even growth of beautiful green grass. The grasses used in making this special mixture are only those that are well adapted for growing in shade. It has been successfully used on some large operations where a green sward was desired on land partially shaded by old trees. Price, qt. 30c., pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S TERRACE MIXTURE A combination of grasses, producing strong spreading roots suitable for terrace, embankments, etc., withstanding drought, thriving in shallow soils and preventing washing out by heavy rains, yet producing a rich, velvety turf throughout the season. Price, qt. 30c., pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S BOWLING GREEN We have selected for this mixture grasses which will produce a hardy, close turf, permitting of close mowing and much hard wear, yet attaining a rich, velvety appearance. Recommended for Croquet Lawns, Bowling Greens, and, in fact, all situations where a fine lawn is required to withstand very hard wear. Price, qt. 30c., pk. \$1.75, bush. of 20 lbs. \$6.00.

SEED FOR PUTTING GREENS Price, pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S FINEST MIXTURES FOR HAY AND PERMANENT PASTURE

We prepare special mixtures containing only the most suitable grasses for permanent pastures and meadow lands, such as Orchard Grass, Meadow Foxtail, Sheep's Fescue, Rhode Island Bent, Meadow Fescue, English Rye Grass, Perennial Sweet Vernal and Red Top in such proportions as will insure the most satisfactory results, producing the heaviest possible crops of hay, far superior to seeding with Timothy and Clover alone, and for permanent pastures allowing of the closest grazing without injury. On ordinary fertile soil sow three bushels per acre; where the soil is poor larger quantities are required. Bush. (14 lbs.) \$3.00.

With the above should be sown ten pounds of mixed Clovers per acre. On account of the greater weight of Clovers they should be sown separately and only in the Spring, as they are inclined to Winter-kill unless well established.

ASTERS

The Aster's vigor and ease of culture are important factors of its popularity. Plants from seed sown in the open ground in May bloom finely in September and October, when the flowers are seen at their best. For July and August flowers sow in March or April, in coldframes, spent hotbed, or pots or boxes in the house. Cover the seed about half an inch deep with rich, light soil, and when the plants have three or four leaves transplant about 18 inches apart each way into well-prepared beds. Manures too fresh or used in too large quantities sometimes induce disease in Asters. When used they should be thoroughly well decayed and mixed with the soil.

ELLIOTT'S SUPERB SWEET PEAS

Sweet Peas are classed among the most popular garden flowers cultivated at the present time. The greatly improved varieties which have been developed in recent years supply flowers which, for perfection of form and beauty of colors, are unrivaled. They are easy to grow and are valuable both for cutting and for garden decoration. The strains we offer are of superior merit, and we recommend them with every confidence. A deep, rich, moist soil is best suited to Sweet Peas. They are usually grown in double rows, with a wire trellis or a row of brush between. For each double row make the drills about five inches deep, and nine or ten inches apart. Sow plentifully, covering about two inches deep, and by degrees, as the vines grow up, fill the trenches with soil. Spring sowings should be made just as early as the ground can be prepared; frost does not hurt the little seedlings. The earliest flowers are from seed sown in the Fall, preferably in a dry situation, and four or five inches deep, giving them level culture. As fertilizer, a liberal use of bone meal worked into the soil will give excellent results.

GLADIOLI

How to Grow.—Gladioli are easily grown and with proper treatment will rank among the most satisfactory and desirable of garden flowers. They succeed well in any ordinary garden soil and will repay any care in cultivation bestowed on them. The ground should be liberally enriched and dug over to a depth of from 15 to 18 inches. They may be planted in the open garden at any time from April until June, setting the bulbs 7 or 8 inches apart and about 4 inches deep. By planting at intervals up to the first of July, blooms can be had all through the Summer and Fall. About the end of October, when the leaves begin to wither, the bulbs should be taken up, dried in the open air and stored in the cellar or any dry place, free from frost, until planting time the following season.

The bulbs should be started in a warm place—greenhouse, hotbed or sunny window. Each 10c., doz. \$1.00, 100 \$6.00.

LILIES

Lilies are easily grown and require little care. They do best in a light, well-drained soil. Some peat or leaf-mold may be used to advantage. ELLIOTT'S VICTORY BALL-BEARING LAWN MOWER

The most perfectly constructed and easiest running machine made

This Mower is fitted with **Ball-Bearings**, which reduce the friction astonishingly—even more in a mower than in a bicycle—rendering it easier to operate a 24-inch of this machine than a 16-inch fitted with the old parallel bearings. The gear is entirely enclosed, so that no dirt or cut grass can find its way into the pinions and clog them. The frame cannot be twisted or jarred out of parallel, being bound tightly together by two steel bolts, which make the most rigid frame ever built, and permit of the mower being readily taken apart. The cutter bar is easily removed for sharpening without disturbing the frame. The slight wear of the cones, balls and cases is perfectly compensated for by two screws, while with the parallel bearing six to ten screws are required. The double ratchet is lightning-like in action, consequently the knives cut the instant the mower is moved. The material of which these mowers are constructed is

Elliott's Victory Ball-Bearing Lawn Mower

the very best, and only skilled labor and the most approved machinery are employed. **Ball-bearings, 10-in. wheels, triple gear, four-bladed reel.**

THE TOWNSEND HORSE LAWN MOWER

We consider this the most perfectly constructed Horse Lawn Mower on the market. Triple rolls with triple pawls in each roll, making the most powerful and instantaneous driving mechanism ever put in a Lawn Mower. Unlike other mowers, the motion of the blades is maintained even when turning sharp corners. The height of cut and motion of knives is under perfect control of the driver from his seat, and the large rolls (15 inches in diameter) insure great power and ease of movement. The self-aligning journal boxes will be found in this mower only, and prevent cramping, a very common fault in Horse Lawn Mowers.

All machines are fitted complete with **Tool Box, Seat, Handles, Shafts and Side-bar Attachment**, which keeps the horse on the cut grass.

KIRKE SYSTEM: Destroy Insects

PRACTICABLE

OR

Fertilize While Watering

ECONOMICAL

SANITARY

EFFICIENT

Kirke System of Fertilizing, Destroying Insects or Fungi, requires the attachment of a Kirke Feeder Cartridge Container to any standard sized water faucet. A Kirke Cartridge (Fertilizer, Insecticide or Fungicide) is placed in the Feeder; hose is attached, and any person, child or adult may do labors that formerly required the attention and intricate

processes of experts. Kirke Cartridges have the special patented feature of dissolving slowly and gradually with an absolutely even and positive distribution. They are composed of the highest grade of concentrated and extremely active chemicals; are sufficiently hardened to prevent a too rapid wasting, but are thoroughly dissolved before leaving the nozzle.

Kirke Feeder Container
Its Fertilizer, Insecticide or Fungicide content dissolves with an even distribution and performs its functions absolutely.

KIRKE FEEDER. A Kirke fertilizer, insecticide and fungicide container and distributor; will last a lifetime; no complicated or intricate machinery. \$3.00 each.

KIRKE FERTILIZER CARTRIDGE. Absolutely soluble and quick acting; a scientifically prepared plant food; eliminates the use of unsanitary and odorous stable manure. \$3.00 per doz., \$1.60 per half doz., 30c. each.

KIRKE "TOBACCO" NICOTINE. Destructive to sucking insects but harmless to the most delicate plants. Poison is distributed simply; nothing cumbersome. \$3.00 per doz., \$1.60 per half doz., 30c. each.

KIRKE HOTHOUSE SPECIAL NICOTINE. A concentrated poison for sucking insects that have become a plague. \$5.00 per doz., \$2.75 per half doz., 50c. each.

KIRKE ARSENATE OF LEAD. A strong stomachic poison; always uniform; will not injure foliage. \$4.50 per doz., \$2.30 per half doz., 40c. each.

KIRKE BLACK ANT DESTROYER. Will not injure foliage, but highly destructive against Black Ants. \$3.00 per doz., \$1.60 per half doz., 30c. each.

KIRKE RED ANT DESTROYER. Performs its functions definitely and quickly. \$3.00 per doz., \$1.60 per half doz., 30c. each.

KIRKE ANGLE WORM DESTROYER. For lawns, golf links, putting greens, croquet grounds, tennis courts, etc. Keeps them smooth and free from weeds by eliminating worm holes and mounds. \$10.00 per doz., \$1.00 each.

Kirke System Sprinkling Can Plant Food

In order to facilitate the fertilization of plants that would otherwise have to be left to struggle for life, without the assistance of Plant Food, it has proved a boon to all lovers of flowers and greens that this product has now been so produced as to be not only beneficial and efficient but also practicable.

Especially useful for piazza plants, house plants, cemetery plots and small gardens. Kirke System Sprinkling Can Plant Food has found favor and elicited the highest praise from all users. It is a scientifically prepared product, properly proportioned to make just the correct plant ration which best promotes and sustains vigorous health, luxuriant growth and abundant and richly colored flowers and grass.

The three important chemical elements which agricultural experts have found to be necessary for the proper sustenance of plant life are:

Nitrogen, which increases the rapidity of growth and prolongs plant life.

Phosphoric Acid, which increases the number of reproductive cells, thereby increasing the number of tubers, fruit or kernels such as wheat and corn, pears

and apples, etc. It also regulates the maturity of fruit by hastening the deposit of starch.

Potash, which supplies strength to the growing stalk, and, by increasing the quantity of starch, regulates to a great extent the size of the crop.

"Kirke System"—the only clean, odorless, positive active, easily handled, practicable, economical and efficient method of destroying insects or fertilizing, requiring no additional labor or experience.

"Kirke System," in competition with any other natural or artificial fertilizer or insecticides method, brings maximum efficiency with a saving to you of time, labor and money.

"Kirke System" abolishes the use of unsanitary stable manure, so objectionable, because of its disagreeable odors and the great abundance of weed-seeds it contains.

"Kirke System" abolishes the use of cumbersome hand-pumps, hand-sprayers, carts and wagons, etc., for distributing insecticides and fertilizers.

LAWN, or TOP DRESSING

Odorless, convenient, quick acting. A food for lawns and golf links. In every way more desirable than manure, avoiding the unsightly litter, disagreeable odor and weed seeds, which cause an endless annoyance. Should be sown broadcast in Spring or Fall, or may be applied in Midsummer without injury to the grass. Quantity required: 10 lbs. for a plot of 300 square feet; 1000 to 1500 lbs. per acre in preparing new lawn, or one-half to two-thirds the quantity in renovating an old lawn. **Price:** 50 lbs. \$1.75, 100 lbs. \$3.25, 200 lbs. \$6.00, per ton (2000 lbs.) \$50.00.

PULVERIZED SHEEP MANURE

This is a pure Natural Manure, and a most nutritious food for plants. It is the best of all manures for mixing with the soil for greenhouse plants—one part of manure to six parts soil. Strawn over and dug into the vegetable garden, or placed directly in drills or hills, it promotes a rapid, steady growth until maturity. In bags of 100 pounds each, \$2.00, $\frac{1}{4}$ ton, 5 bags, \$9.00; per ton, 20 bags, \$30.00. In packages of 2, 4 and 10 pounds, 15c., 25c. and 50c. each.

DRIED BLOOD

For top dressing, mixing with the soil and applying in liquid form, 100 lbs. \$4.50

ASHES, UNLEACHED (Canada Hardwood)

Contain all fertilizing elements except nitrogen. They drive away insects, and are indispensable for all crops requiring potash. They are very beneficial for garden and field crops, and are of high value for cabbage, potatoes, onions, strawberries, fruit trees, grass-lands and lawns. Apply 1 to 2 tons per acre, as one heavy application will help much more than the same quantity would applied in fractions. Price, bag, about 100 lbs., \$2.00; per ton (2000 lbs.) in bags, \$25.00.

NITRATE OF SODA

This is valuable solely for the nitrogen it contains, equal to 20 per cent. of ammonia. It is very quick in action and hastens the maturity of crops fully two weeks. Being extremely soluble, it should not be applied until the plants are above ground, when 100 to 500 pounds per acre, mixed with wood ashes or land plaster, for convenience in applying, are generally used. Price per 5-lb. package, 35c.; 10-lb. package 60c.; per 100 lbs., \$5.00

CRUSHED, or COARSE RAW BONE

Excellent for graperies, etc., where more permanent results may be obtained than from use of fine bone. 100 lbs., \$3.00; 200 lbs., \$5.50.

BLOOD AND BONE

A very concentrated source of nitrogen, yielding ammonia, etc., by gradual decomposition, and, in consequence, is superior for immediate as well as for prolonged results; it is of exceptional value for garden crops, root crops, corn, grain, grasses, fruit trees, small fruits, grape-vines, and, in fact, all kinds of vegetation. Quantity required: When broadcast and harrowed in, from $\frac{1}{2}$ to 1 ton per acre. For garden crops, drill in 300 to 500 lbs. per acre. 100-lb. bag, \$2.75; 200-lb. bag, \$5.00; ton of 2000 lbs., \$40.00.

PURE FINE RAW GROUND BONE

CLAY'S FERTILIZER

We have been appointed sole agents for this valuable English manure, which is constantly increasing in popularity. It is undoubtedly one of the best for all purposes, either in greenhouse or garden, and we believe its high reputation is well deserved. It is productive and lasting, and notwithstanding its apparently high price, it is quite economical. Per $\frac{1}{2}$ cwt. (56 lbs.) \$4.00; cwt. (112 lbs.), \$7.00.

POTATO AND VEGETABLE FERTILIZERS

Potato Manure. For Irish and sweet potatoes, also for asparagus, early vegetables, tomatoes, sugar beets, fruits and sorghum. Use three bags per acre. Per bag (200 lbs.), \$4.50; per ton, \$43.00.
